

Price Edge

Your employees have convenient access to discounts for some generic medications

The rising cost of prescription drugs is motivating many people to shop around for lower medication prices. With so many pricing search tools and discount drug cards available, this can be challenging and time-consuming.

Your commercial drug plan has the power to make this experience easier for your employees.

Price Edge, which is included with your benefits, gives your employees:

- **Lower costs** for their nonspecialty, generic medications
- **Higher satisfaction** with their prescription drug coverage

Providing support behind the scenes

Your employees will continue filling their prescriptions as usual while Price Edge:

- **Finds discounts:** Price Edge searches for prices offered by drug discount cards.
- **Reviews your benefits:** Prices for eligible medications are automatically compared to the coverage offered through your company's benefits.
- **Applies the lowest price:** Your employees will pay the lowest price available for eligible drugs, including nonspecialty, generic medications not covered by their benefits.

With Price Edge, your employees will feel like their prescription drug benefits are helping them manage their health and their budget. The program will:

- Automatically apply the cost of your employees' covered medications to their out-of-pocket maximum and deductible totals. If a drug isn't covered, Price Edge will provide a discount but won't apply it toward your employees' out-of-pocket and deductible totals.
- Retain your employees' medical history. This will make sure our clinical programs and drug safety checks continue to protect their health.
