CPT® II and ICD-10 codes for star measures

This tip sheet includes commonly used CPT® II and ICD-10 codes for the listed HEDIS® star measures. Submitting CPT® II and ICD-10 codes can close quality gaps in care and substantially reduce medical records requests to confirm care you have already completed or to exclude patients who are exempt from certain measures.

For more about each measure, refer to the individual measure tip sheet, which includes measure definitions, additional exclusions, gap closure tips and more.

CPT® Category II codes that can close select HEDIS® measures

Comprehensive diabetes care (CDC)

- **HbA1c results:** The last A1c ≤ 9% is considered compliant for star reporting. When conducting an HbA1c in your office, submit the results on the HbA1c claim with the appropriate CPT® II code:

<table>
<thead>
<tr>
<th>CPT® II Code</th>
<th>Most Recent HbA1c Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>3044F</td>
<td>&lt; 7%</td>
</tr>
<tr>
<td>3045F</td>
<td>7.0 – 9.0%</td>
</tr>
<tr>
<td>3046F</td>
<td>&gt; 9%</td>
</tr>
</tbody>
</table>

- **Retinal eye exam results:** When results are received from an eye care professional and the member is in a Medicare Advantage plan, submit the results on a $0.01 claim with one of the following CPT® II codes as appropriate:

<table>
<thead>
<tr>
<th>CPT® II Code</th>
<th>Retinal Eye Exam Findings</th>
</tr>
</thead>
<tbody>
<tr>
<td>2022F</td>
<td>Dilated retinal eye exam with interpretation by an ophthalmologist or optometrist documented and reviewed</td>
</tr>
<tr>
<td>3072F</td>
<td>Low risk for retinopathy (no evidence of retinopathy in the prior year)</td>
</tr>
</tbody>
</table>

- **Kidney disease monitoring:** Submit a claim for a urine protein screening test or report evidence of medical attention for nephropathy during the current year. Patient claims should include:

<table>
<thead>
<tr>
<th>CPT® II Code</th>
<th>Situation</th>
</tr>
</thead>
<tbody>
<tr>
<td>4010F</td>
<td>Use when you prescribe an ACE/ARB</td>
</tr>
<tr>
<td>3066F</td>
<td>Use to indicate kidney transplant or nephrology visit, patient receiving dialysis or patient being treated for ESRD, CRF, ARF or renal insufficiency</td>
</tr>
</tbody>
</table>
Controlling high blood pressure (CBP)

You can use the ICD-10 code R03.0 when the patient has an elevated blood-pressure reading without a diagnosis of hypertension such as with white coat syndrome or transient hypertension. Submit blood pressure CPT® II codes for each office visit claim. The last blood pressure of the year is used to determine compliance. HEDIS considers blood pressures less than 140/90 as compliant.

Medication reconciliation post discharge (MRP)

Medication reconciliation post discharge must be done within 30 days of inpatient discharge. Include the following CPT® codes on the claim, as applicable:

<table>
<thead>
<tr>
<th>CPT® Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1111F</td>
<td>Discharge medications reconciled with the current medication list in the outpatient medical record (you can bill this with the visit or individually)</td>
</tr>
<tr>
<td>99495</td>
<td>Transitional care management services with moderate complexity (face-to-face visit within 14 days of discharge)</td>
</tr>
<tr>
<td>99496</td>
<td>Transitional care management services, with high complexity (face-to-face visit within 7 days of discharge)</td>
</tr>
</tbody>
</table>

ICD-10 codes that close the Adult BMI Assessment (ABA) HEDIS® measure

ICD-10 Codes that Result in HEDIS® Measure Exclusion

The services identified in some measures may not be relevant to certain patients based on their medical situation. By submitting appropriate ICD-10 codes, patients are excluded from select measures.

Exclusions help patients by ensuring they are not burdened with unnecessary tests or treatments that may not benefit them. Exclusions help providers improve care by allowing them to focus efforts for cancer screenings and disease-specific treatment and management on patients most likely to benefit from that care. Coding exclusions also increase measure performance by reducing the number of patients being measured to only reflect those who require the service.

Breast Cancer Screening (BCS)

Patients are excluded from the measure if they have a history of bilateral mastectomy. Include the following ICD-10 diagnosis code(s) on the claim as appropriate:

<table>
<thead>
<tr>
<th>ICD-10 Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Z90.13</td>
<td>Acquired absence of bilateral breasts and nipples</td>
</tr>
<tr>
<td>Z90.12</td>
<td>Acquired absence of left breast and nipple</td>
</tr>
<tr>
<td>Z90.11</td>
<td>Acquired absence of right breast and nipple</td>
</tr>
</tbody>
</table>

Colorectal Cancer Screening (COL)

Patients are excluded from the measure if they have a history of colorectal cancer. If the member has a history of colorectal cancer, please include the following ICD-10 diagnosis code(s) to the claim, as appropriate.

<table>
<thead>
<tr>
<th>ICD-10 Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Z85.038</td>
<td>Personal history of other malignant neoplasm of large intestine</td>
</tr>
<tr>
<td>Z85.048</td>
<td>Personal history of other malignant neoplasm of rectum, rectosigmoid junction and anus</td>
</tr>
</tbody>
</table>

Statin Therapy for Patients with Cardiovascular Disease (SPC)

When patients can’t tolerate statin medications, they’re excluded from the measure. Document their condition in their medical record and submit a claim using the appropriate ICD-10 code:

<table>
<thead>
<tr>
<th>Condition</th>
<th>ICD-10 Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Myalgia</td>
<td>M79.1-M79.18</td>
</tr>
<tr>
<td>Myositis</td>

</tr>
<tr>
<td>Myopathy</td>
<td>G72.0, G72.2, G72.9</td>
</tr>
<tr>
<td>Rhabdomyolysis</td>
<td>M62.82</td>
</tr>
</tbody>
</table>
In 2018, the National Committee for Quality Assurance (NCQA) allowed additional exclusions to HEDIS® star measures for patients with advanced illness and frailty.

Advanced illness codes include conditions, such as metastatic cancer, heart failure and late stage kidney disease, and medications such as dementia medication. These must be billed in the measurement year or the year prior to exclude the patient from the measure.

Frailty codes include equipment that is typically submitted on claims such as hospital beds, wheelchairs and oxygen. However, there are frailty codes that are not always routinely included on claims (examples: weakness, fatigue, falls). These must be billed in the current measurement year to exclude a patient from a measure.

Patients age 66–80 must have advanced illness and frailty to be excluded from the measure. Patients 81 and older qualify for exclusion with frailty alone. This table lists the star measures impacted by advanced illness and frailty exclusions along with the ages per measure.
