## **Custom Select Drug List Alternatives for Most Common Drug Exclusions**

The drugs shown below aren't covered on the Blue Cross Blue Shield of Michigan and Blue Care Network Custom Select drug list. In most cases, if you fill a prescription for one of these drugs, you'll pay the full retail price. Brand (trade) names are provided for reference, but both the brand-name drugs and their generic equivalents are not covered.

If you're currently using one of the excluded drugs, please ask your doctor whether one of the following suggested alternatives for the drug you are using is right for you. The brand names for the suggested alternatives are listed in parentheses for reference. They have similar effectiveness, quality and safety but at a fraction of the cost. Over-the-counter (OTC) alternatives that are available for purchase without a prescription may also be a therapeutic option, as suggested throughout this list. Our exclusions criteria are based on current medical information and have been approved by the Blue Cross Pharmacy and Therapeutics Committee. If medical necessity coverage is approved, quantity limits may apply.

The following list isn't comprehensive. Members should refer to their specific drug benefit information for a full list of covered drugs and requirements. Full drug lists and coverage requirements can be found at [bcbsm.com/pharmacy](http://bcbsm.com/pharmacy). If you have a question about a drug that isn't covered and doesn't appear on this list, call the Customer Service number on the back of your Blue Cross ID card.

Prior authorization or step therapy may be required for some covered alternatives. Refer to the Custom Select Drug List for tier placement and restrictions.
