

Pharmacy programs ensure safety and cost-effectiveness

We monitor the use of certain medications to help ensure you receive the most appropriate and cost-effective drug therapy. Our Quantity Limits program is one of the ways we monitor medications. Our Dose Optimization program is one of the ways we monitor medications to help ensure you receive the most appropriate and cost-effective care. Here's how it works:

Quantity limits

Our Quantity Limits program limits the amount of medicine that you can fill for certain medications. For example, a drug may have a limit of 30 pills per 30 days. We apply such limits, based on drug studies and reviews by actively practicing doctors, to certain drugs in weight loss, smoking cessation, erectile dysfunction, nausea and several other categories. If you refill a prescription too soon or if your doctor prescribes an amount that's higher than usual, your pharmacist will tell you that the drug isn't covered.

Dose optimization

Dose optimization means taking more of a medication once a day instead of taking a lower dose two or more times a day. It's easier to remember to take a medication once a day, and it will probably cost you less. In some cases, your out-of-pocket costs can be reduced by as much as 50 percent. Included in this program are drugs for depression, cholesterol, heart disease and several other drug categories. Talk to your doctor about dose optimization.

Only your doctor can request coverage for drugs that exceed BCN limits.

Antidepressants	Limit	Custom Select
Brintellix® (Nonpreferred)*	1 tablet per day	Excluded
